Research Title : COMPARISONE BETWEEN TWO CROWN LENGTHENING
COMPARISONE BETWEEN TWO CROWN LENGTHENING

Descriptipn : This clinical study was designed to evaluate the clinical outcomes and the periodontal tissue reactions following surgical crown lengthening alone and in comparisone with a combined orthodontic-periodontic therapy for the management of esthetic zone short clinical crowns. Twenty patients contributing at least single tooth with short clinical crown at the esthetic zone, completed the study.

Research Type : Thesis

Added Date : Wednesday, January 02, 2008
